

Ontario is a marvelous economic engine.

Dalton McGuinty wants to put water in the gas tank

For decades, Ontario's electricity has been stable and affordable because we use a balanced mix of coal, nuclear, and hydro generation. Our steady supply of low-cost power has made our province the engine of Canada's economy.

The government wants to shut down the coal generation stations and drive electricity prices right through the roof. Ontarians will have less cash in their pockets at the end of each month. Ontario businesses might be forced to move to jurisdictions where electricity is more affordable. Ontario workers could lose their jobs. Goodbye prosperity, hello deficit.

Throwing away coal is totally unnecessary. With today's clean coal technology we can improve Ontario's air quality and have affordable electricity for everyone.

All it takes is for Dalton McGuinty to show some smart leadership, and say yes to clean coal.

Mr. Premier — don't thin the mixture in Canada's economic engine. Don't close the coal plants. Invest in clean coal and keep Ontario's power affordable.
